#### **Abstract**

The purpose of this paper is to review some previous works and methods in the field of ICT integrated into English Language Teaching (ELT). This study seeks how technological advancement improving the standard of education in classrooms but in some regions of Haryana, it is not so. The use of ICT in English language teaching lends itself to more student-centered learning settings. These technologies are making classroom teaching and learning more effective rather than the traditional methods. The primary aim of this study is to indicate what has been done about ICT implementation in English language teaching in the backward regions of Haryana. ICT is an innovative method of learning and teaching but the ratio differs in the Mewat region. This study will reveal some of the initiatives taken by the state and central government to enhance the education level in English Language Teaching. What exactly is the status of ICT applications in the schools of Haryana?

Keywords: Information Communication Technology, English Language Teaching, innovative.

#### **INTRODUCTION**

The proposed research seeks to study the technological advancements that Information Communication Technology (ICT) has made to raise the standard of English Language Teaching (ELT) in classrooms. ICT integrated into ELT is an innovative method to enhance learning skills among students. ICT is a term that focuses broadly on the use and integration of communication technologies in information technology. The term ICT was first used by Dennis Stevenson in 1997. ICT covers the computer hardware; the software programs; and the communication that occurs between more than one different computerized device. ICT is the digital processing and utilization of information by the use of electronic computers. It comprises the storage, retrieval, conversion, and transmission

information. (Ifueko Omoigui Okauru, 2011) Daintith defines ICT as, "A branch of engineering dealing with the use of computers and telecommunications equipment to store, retrieve, transmit and manipulate data" (43). ICT is an extended term of IT, which is related to all computing components. In this modern era, the English language plays a fundamental role in every field. The English language has gone through drastic changes in previous years due to the dawn of the latest technologies and innovative methodologies. It is a tool of civilizing teaching methods or theory with the help of existing types of media. Traditional methods of teaching are less effective the modern methods. ELT teaching and learning through the latest technology is more effective. Computers make learners work at their own pace.

ICT stands for 'Information Communication Technology 'and it refers to technologies that offer access to info through telecommunications. ICT can be considered as a synonym of IT (information technology). Until the Eighties, media relied primarily on print and analog broadcast models, such as TV and radio. The last twenty-five years have seen the variation in media that were found on the employment of digital technologies, such as the web and video games. The revolutions happening in new media along refer to revolution. the ICT **ICT** mav

a word for information Technology (IT) whereas communication is completely focused communication technologies. This includes the web, wireless networks, cell phones, and different communication mediums. The recent revolutionary advancements have transformed our world into what's known as a 'knowledge society', wherever the info is more globally shared and freely accessed than ever before and its advances have an effect on all aspects of our life, particularly our approach to ELT. (qtd by Christens son, Per.)

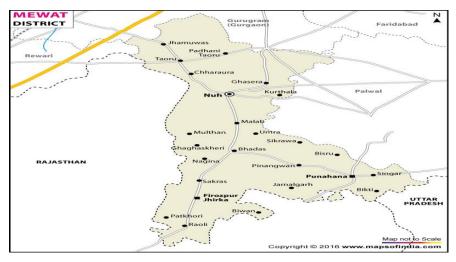

Figure-1: Map of Mewat region in Haryana

#### INTRODUCTION

Mewat is 50kms away from Guru Gram and 70kms away from Delhi but it is the least developed district of Haryana. The United **Nations** Development Program (UNDP) (2016) defines Information and Communication Technologies: "ICTs are information-handling tools - a varied set of goods, applications and services that are used to produce, store, and process, distribute and exchange information". They include the old ICTs of radio, television, and telephone, and the new ICTs of computers, satellite, and wireless technology and the Internet. (Budhedeo 4759) Mewat region is the most undeveloped district of Haryana, Mewat is sharing boundaries with the most developed cities like Delhi and Guru gram. Haryana is a state which seeks and motivates innovative and advanced methods in teaching-learning practices. This research seeks that what advancement is being taken place till now, what are the major issues or

hindrance in terms of education. ICT integrated into ELT is an innovative process in which many sources support integration. The government has taken up many initiatives but Mewat is untouched by those advancements, children are not extroverts they don't want to be a part of the world. In this region lack of research can also be one of the reasons. This research will reveal some of the facts which are the major hindrance in the development of Mewat. If we look at the map we are having some areas like padhani, Taoru they are comparatively much more developed than the others, reason behind this is border sharing with Gurugram. Mewat region is the least developed in terms of education in Haryana. As per the earlier surveys conducted by the Haryana government, the major concerning region was Mewat. Researchers don't want to conduct any survey in this area.

#### **PROBLEM STATEMENT**

The present study will examine the impact of ICT to ELT in senior secondary schools of the Mewat region in Haryana. Nowadays, ICT integrated learning is effective as well as an interesting tool for students as well as teachers. Both government and private schools are interested in giving education through ICT, however, the challenge is the operational and maintenance part. Skilled teachers are also required to meet innovative education demands. There is an immediate need to explore language skills among students to impart the ICT integrated to ELT.

#### **OBJECTIVES**

- To study the existing facilities provided to ELT students by the state government/education ministry.
- To explore language skills among the students with ICT integrated to ELT and the learning process.

#### **METHODOLOGY**

The questionnaire method has been followed to analyze ICT to ELT in senior secondary schools in the Mewat region of Haryana. Before the final study, preliminary discussions were happened with the senior management to take their consent. A questionnaire of 30 questions each has been prepared to assess the impact of ICT to ELT in 20 senior secondary schools of Mewat in Haryana. The structured questionnaires and personal data schedule were prepared for ELT students and including learning experience etc to achieve the aim of this research. Data was collected from 240 respondents in which Likert's 5-Point Scale has been used to get responses from students.

#### **Existing Facility**

As per the responses of the school students, in regards to the existing facility, 90.83% students (agree 47.1%, strongly agree 43.8%) are not satisfied with the existing facilities whereas 7.5% students are dissatisfied (disagree 5.8%, strongly disagree 1.7%) with the existing facilities. To evaluate the responses statements like school does not provide technical assistance when a teacher faces any difficulty,

language lab plays a significant role in the development of language skills, teachers are unable to use language software and office software (e.g. word, excel, access, PowerPoint) for classroom teaching, etc, were asked. Hence, it can be inferred that as per private students' point of view, in Mewat existing facilities do not have a significant impact on students in regards to ICT to ELT for senior secondary school.

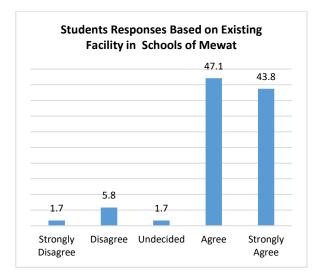

Figure-2: Students Response to Existing Facilities

#### Language Skill

As per the responses of the school students, in regards to language skill, 87.10% students (agree 53.3%, strongly agree 33.8%) are satisfied with the language skills whereas 12.9% students are dissatisfied (disagree 8.8%, strongly disagree 4.2%) with the language skills provided in the school. To evaluate the responses statements like Techknowledge is making you well equipped, Quality of language education can be enhanced through ICT, It enhances the LSRW skills through digital classroom were asked. Hence, it can be inferred that as per students' point of view in Mewat, language skills do not have a significant impact on students in regards to ICT to ELT for senior secondary school.

#### Conclusion

The proposed resource seeks to identify whether ICT facilitates ELT for senior secondary selected schools in Haryana as per students. As per the respondents, ICT (Information Communication Technology) integrated to (ELT) English Language Teaching is an innovative method to enhance learning skills among respondents. Here in the research ELT through ICT and its acceptance has been discussed. Overall per the respondents (students) from the schools agreed that ICT integrated learning to ELT is significantly effective and efficient. Here in the research findings signifies that perceptions of the implementation of ICT tool in ELT teaching in the classroom among students and teachers come with significant challenges especially in government schools. The study also reveals that the Indian government has taken up initiatives to support ICT but implementing the same in the real world is still a challenge in regards to operation and maintenance. As per the discussion with the management and teachers, skilled teachers are also required, to meet the demand for innovative education. Implementing ICT in the selected school of Haryana is a challenging task. The study reveals that students are not satisfied with the learning skills and existing facilities in the Mewat region.
